

The Seismic FireGator expansion joint

Protect your fire sprinklers from building movement

Whoa!...
Did you feel that?
Something was
really movin'!

Meet the lean, mean in-line seismic machine

The Seismic FireGator joint absorbs $\pm 4"$ movement in all directions

Designed to protect fire sprinkler piping systems crossing a building's seismic joint, the rugged Seismic FireGator's small profile makes it ideal for applications requiring a minimal footprint.

The Seismic FireGator can be installed vertically or horizontally, and is maintenance free for the life of the piping system.

Designed and engineered to combine tried and true gimbal and bellows technologies with a rugged Metraflex in-line expansion joint, the Seismic FireGator is an extraordinarily strong, compact seismic expansion joint.
